

# Ideas

# Kiva *light*

*A light version of the Kiva website would reduce the time necessary to load each page saving time for Kiva partners suffering from inconsistent internet connectivity and slow connection speeds.*

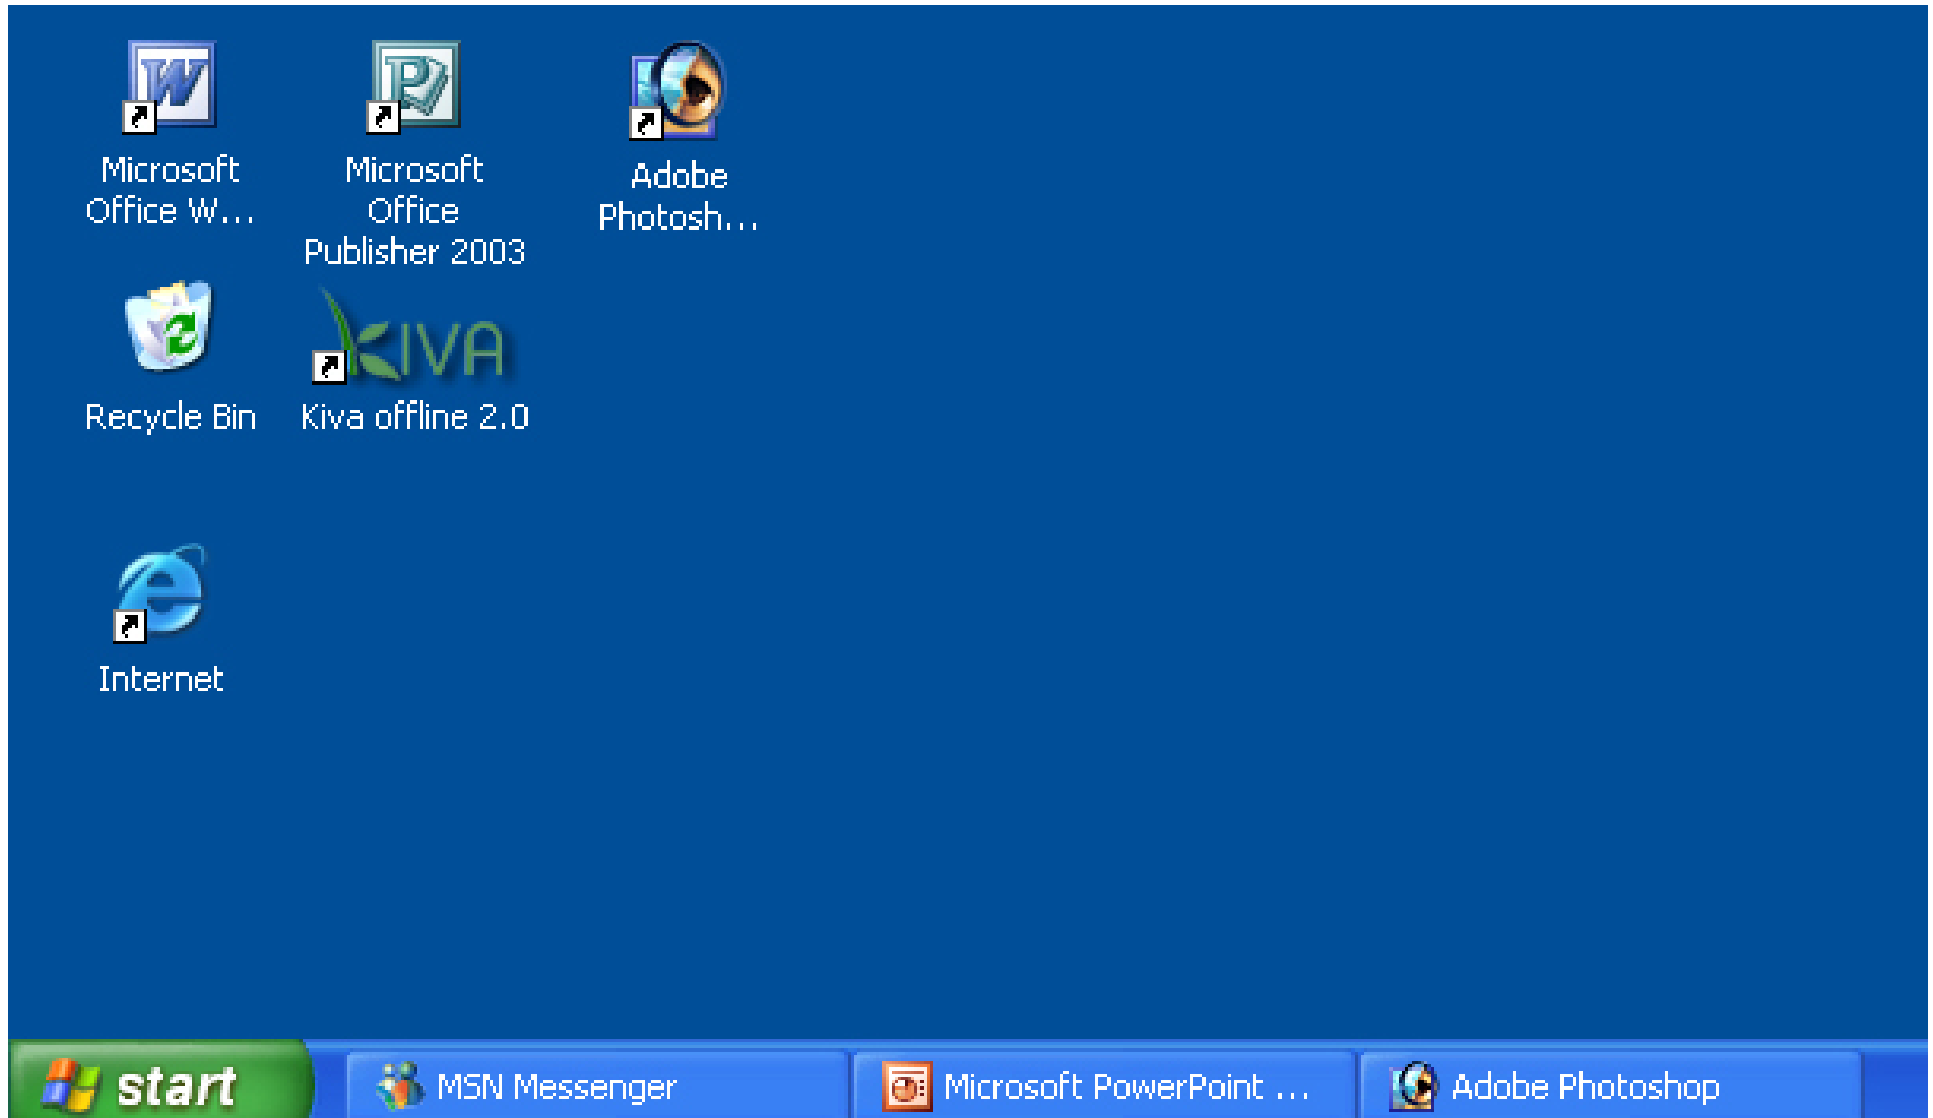

The screenshot shows a Microsoft Internet Explorer browser window with the title "Kiva - Microsoft Internet Explorer". The address bar displays "http://www.kiva.org/app.php". The page content includes a navigation menu with links for "Home", "About", "Businesses", and "Account". A "Login Form" section contains the following elements:

- Navigation links: [Kiva Gift Cards](#), [Login](#), [Register](#), [My Basket](#), [Spread the Word](#)
- Navigation links: [Home](#), [About](#), [Businesses](#), [Account](#)
- Section header: **Login Form**
- Input fields: **ID:** [text input], **Password:** [text input]
- Checkbox:  Remember my ID on this computer
- Button:
- Footer links: [Why this is secure](#), [Forget your ID or password?](#)

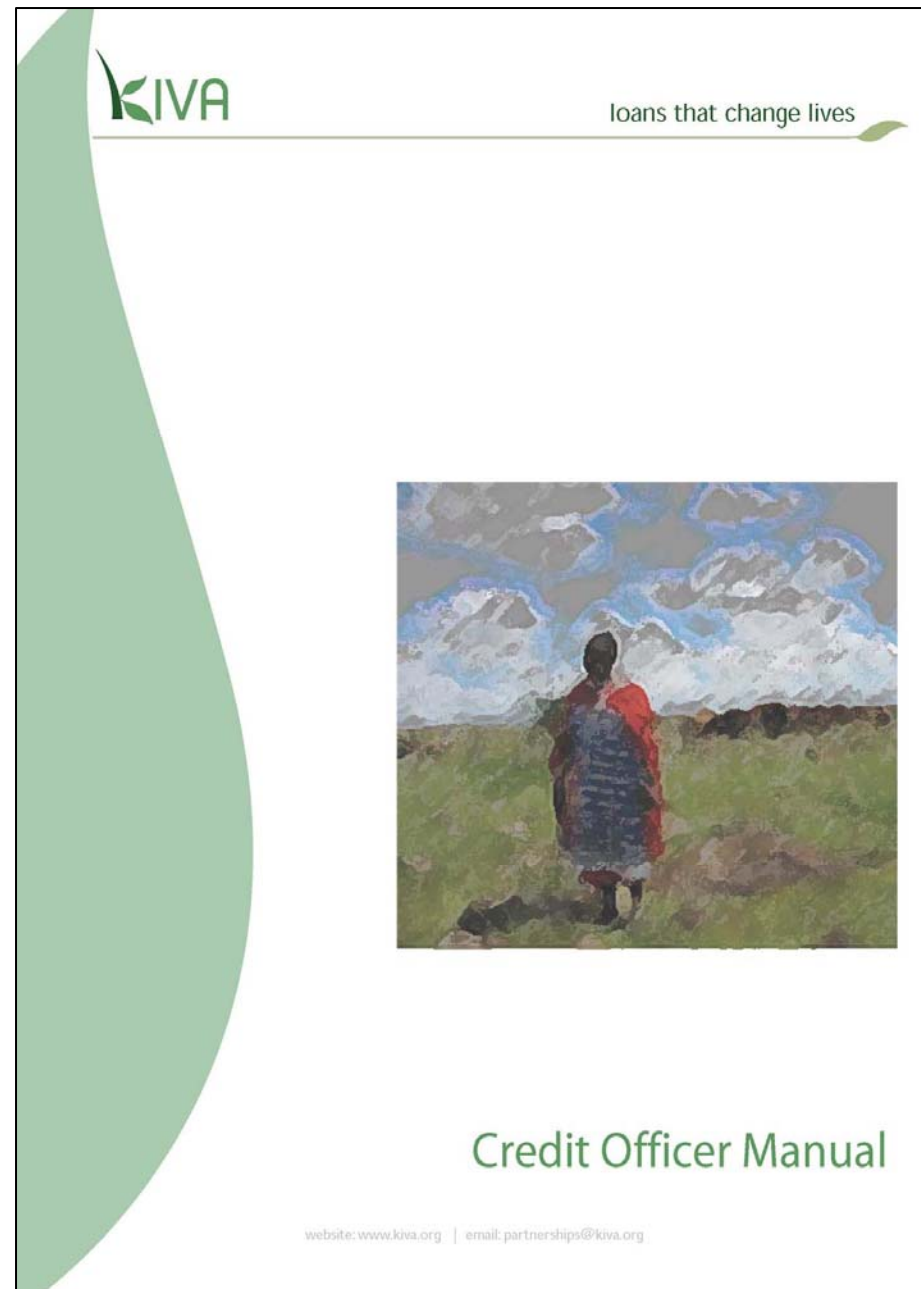

# Kiva offline 2.0

*Connectivity issues were so pronounced that this proposal suggested the creation of a piece of software that allowed users to work entirely offline automatically uploading updated information periodically when the connection was supportive.*

# Kiva Manual

*A manual was proposed to facilitate users educating themselves on the operation of the Kiva website. The manual was a response to the eagerness to learn detected during context research.*

# Mobile Miracle Solution

*This proposal permitted content delivery over the mobile phone. Through the use of the MMS supported by new mobile phone handsets messages including text and an image can be sent to an email address whereby they are then parsed and appear on a specified website.*
